

Seed Packet: Fill in [Plant name, date and origin]. Text at top and left flap can be changed as well as image. Cut along dotted lines, fold at solid lines, and use glue to secure the side and bottom. Seal the top with either glue or transparent tape. Use different color paper for different types of plants, if desired.

Uluha'o o Hualalai

Hawaii

Pukiawe

Indigenous

Date:

Collect dried berries and open to expose seeds. Soak seeds in vinegar for 20 min. Then soak in warm water(120' F) for up to 2 hours. Plant seeds ½" deep in a well drained planting medium. Keep it moist and in the shade. Germination : approx. 3-6 months. After seedlings form , gradually acclimate them to full sun.

Cut along dotted lines

Uluha'o o Hualalai

Hawaii

Mamane

Endemic

Date:

Break open seed pods to collect seeds, snip off tips of seeds then soak in water for 5-10 min. Plant in soil, allow 3-4 weeks for germination.

Uses: Mamane is one of the hardest, long-lasting woods, used for Holua boards, fences, house posts and digging sticks. Burns really hot, producing a different color flame. Flowers were woven into leis.

Cut along dotted lines except inside lines
